

Download Tool User Guide SOP

4/10/2012

NOTE

■ About EMMC Download and Firmware upgrade

— Tool Support

- Download tool W1204 and after can support EMMC download

■ About 6575 change feature

- MT6575 support **USBDL Auto Detect Trigger Feature.**
- MT6575 **Meta mode** related and **Modem related tool is the same as MT6573.** you can keep your 6573's tool.
 - HW Test Tool
 - SP/MAUI Meta
 - ATE
 - SN Writer Tool

EMMC USB 921600 bps

Preparation

■ Download Agent

- The agent on target to perform the download procedure upon tool request
- FlashTool will load *MTK_AllInOne_DA.bin* automatically

■ Scatter-loading

- Describe the start address of each partition to download to
- The **storage type** & **chip** is embedded into scatter file name
 - Naming Rule is define in .image_map.xml
 - For downloading **NAND images**
 - *MT6575_Android_scatter.txt*
 - For downloading **eMMC images**
 - *MT6575_Android_scatter_emmc.txt*
- In *alps/out/target/product/[project]* folder

eg:MT6575

■ ROM Files

- In *alps/out/target/product/[project]* folder

NAND Partition Layout

■ Pre-loader

- Pre-loader image
- Handles all the download and secure boot procedures

■ DSP_BL

- DSP boot loader

■ U-boot

- Second loader image
- Handles most hardware initializations and bring-up entire Linux kernel

■ Boot

- Linux kernel image and it's root file system

■ Recovery

- Recovery kernel image and it's root file system
- Handles all the system recovery and firmware update functionalities

■ System (Android)

- Android system image

■ Logo

- Boot-up logo image

Index	Partition	Type

13	CACHE	YAFFS2
14	USRDATA	YAFFS2

NAND Partition Layout (cont.)

■ NVRAM

- Stores the hardware related information, such as calibration data, MAC address, IMEI ... etc.

■ Cache

- For Android internal used
- Store Android internal cache data or web cache data

■ Misc

- Used for the recovery procedure (power loss)

■ User

- Used for Android system to store user data such as user contacts, settings, installed applications ... etc.

■ SECCFG and SEC_RO

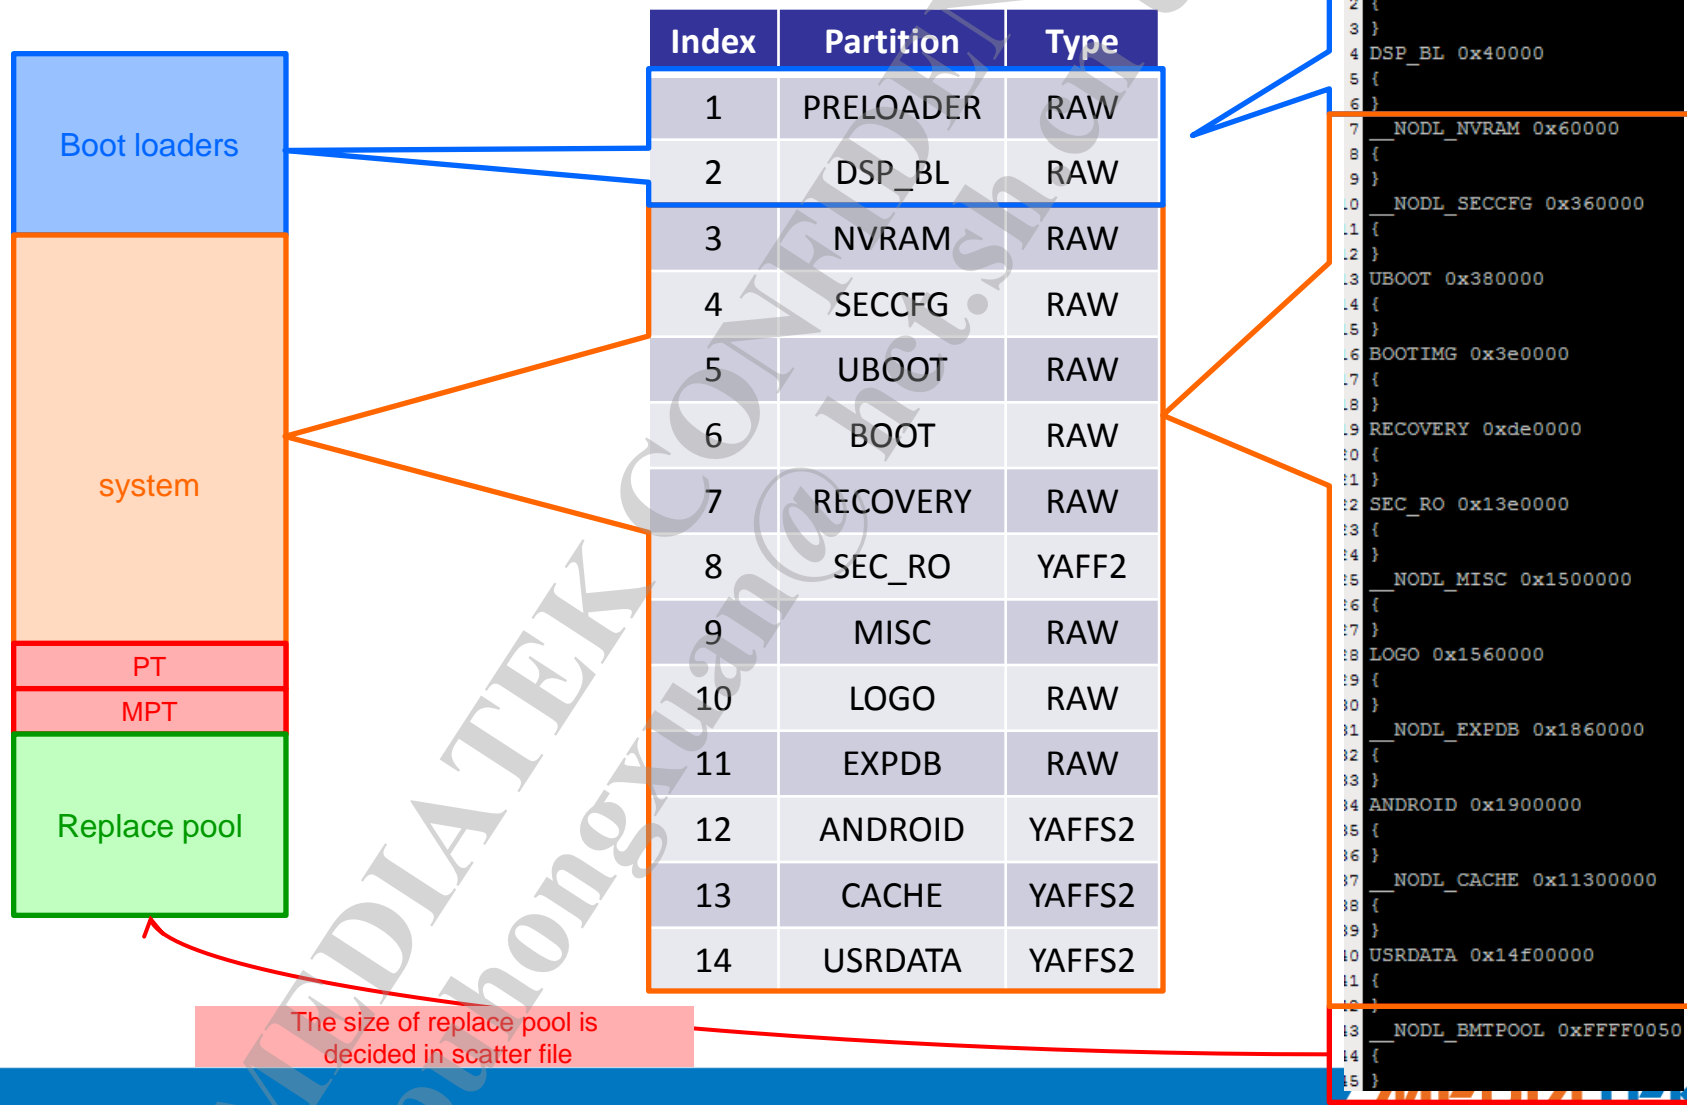

- Reserved for the security platform used

■ EXPDB

- Used to store the kernel panic debug messages

USBDL Trigger Diff

Feature	MT6573	MT6575
Blank device USB DL	O	O
Auto-detection	X*	O
USB DL Key	O	O

- X* : MT6573 preloader can support *Preloader DL DA in Auto Detection mode*.
 - Preloader Download DA Feature: FlashTool 1148 supported, MDT not supported
 - Patch ID : ALPS00087511

USB DL and Bootup Mode

■ USB DL Download Flow

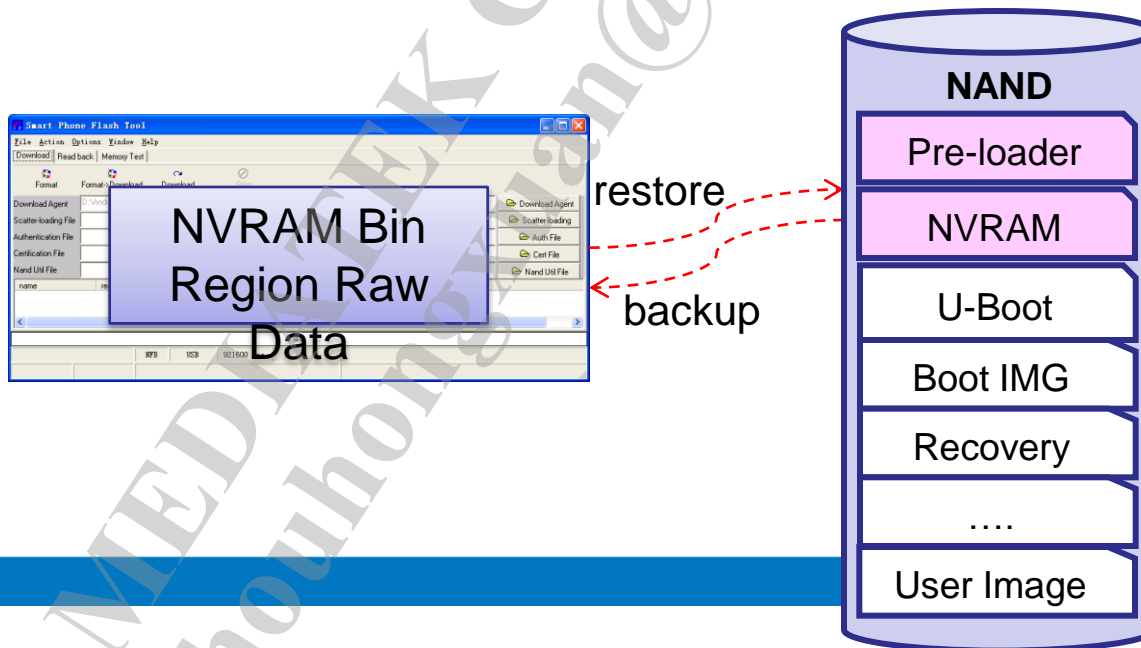

Trigger Condition	Battery	Mode	Note
Step1: KCOL0 = LOW Step2: Plug-in USB cable	Yes	USBDL	No Timeout
Step1: KCOL0 = LOW Step2: Press PWR_KEY	Yes	USBDL	No Timeout
Step1: KCOL0 = LOW Step2: Plug-in USB cable	N.A.	USBDL(recommend)	1. No Timeout 2. Without VBAT 限制: 需要按下KCOL0 3~5 s
Step1: KCOL0 = HIGH Step2: Plug-in USB cable	N.A. or YES	USBDL(MT6575 emmc default support)	1. AutoDetect +5V 2. 30s timeout , if no preloader 3. Custom timeout, if exist preloader
Step1: KCOL0 = HIGH Step2: Press PWR_KEY	Yes	Normal Boot	Normal boot-up

— Note

- Preserve UART1/Uart4/USB test points always.
- KCOL0 should be easy to pressed in production line
- KCOL0 should NOT be pressed, when Normal Boot

Feature Support - SP Flash Tool

- Firmware Upgrade -- Format+Download
 - ReadBack NVRAM Bin region to PC
 - Format the flash from **Preloader** to **User Image**
 - Download all image
 - Restore NVRAM Bin region to target

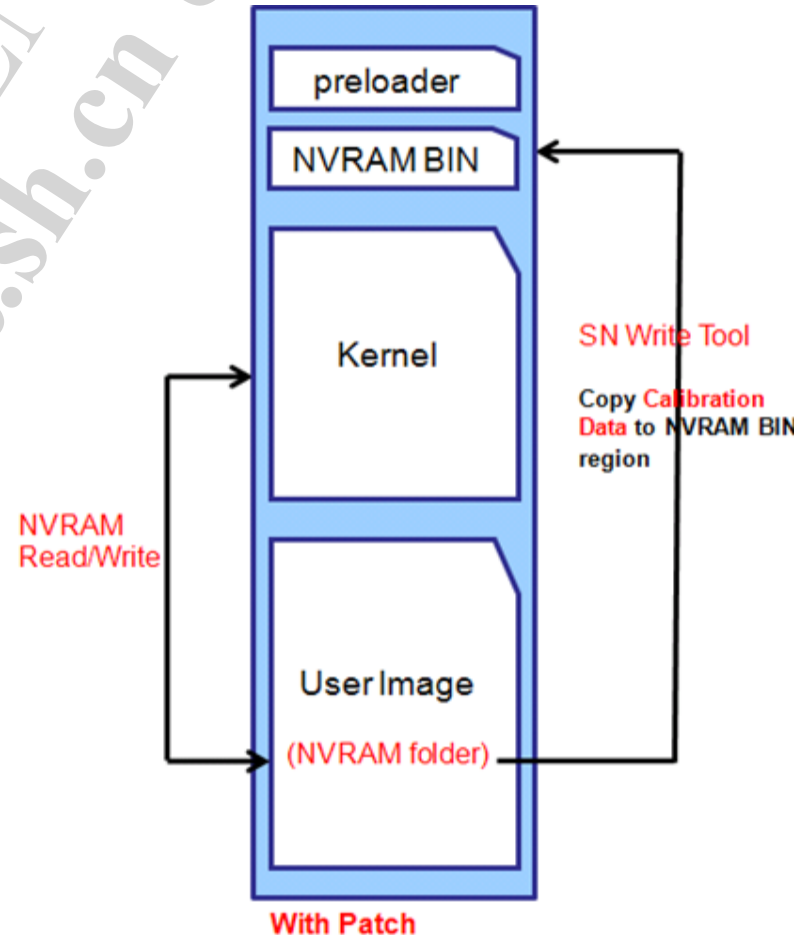

Firmware Upgrade

■ NVRAM and BIN Region

- Backup Bin region
 - Tool: **SPMETA_Clean_Boot()**
 - ATE backup, when passed;
 - SN backup, if option checked
- Clean Boot
 - **Delete nvram in User Image, Recovery next Bootup**
 - Setting -> Reset to Factory
 - Factory Mode->Clear Flash
 - Recovery Mode->Clear User Data

■ Firmware Method:

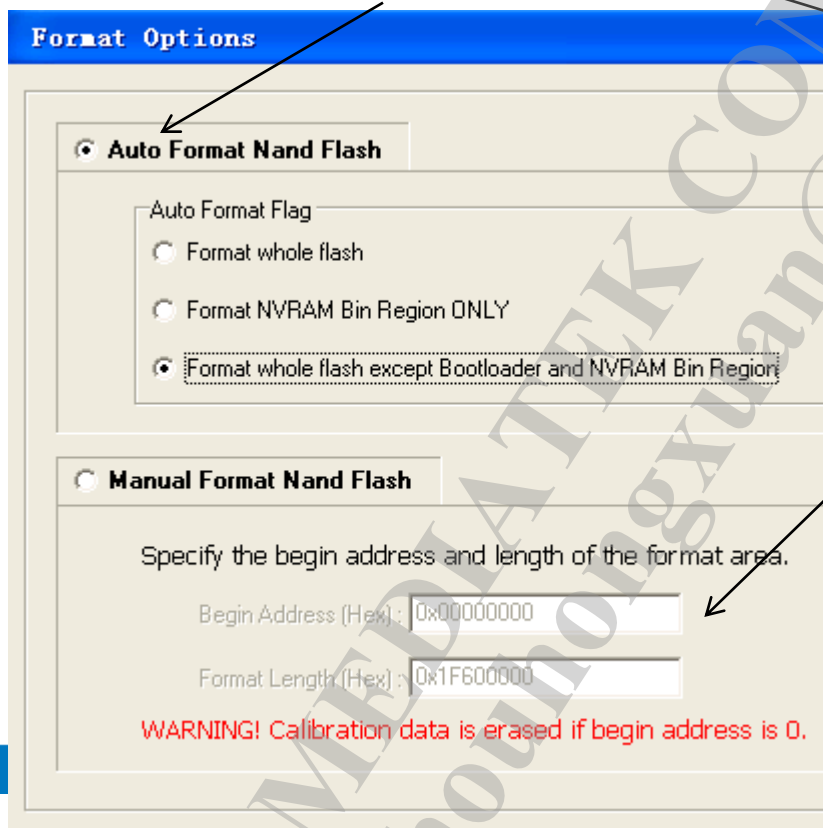

- USB download ROM
- USB Backup->DL->Restore
- SD Update
 - Preserve **preloader and NVRAM**
 - **Support NAND layout change and Partial Update**

Feature Support - SP Flash Tool

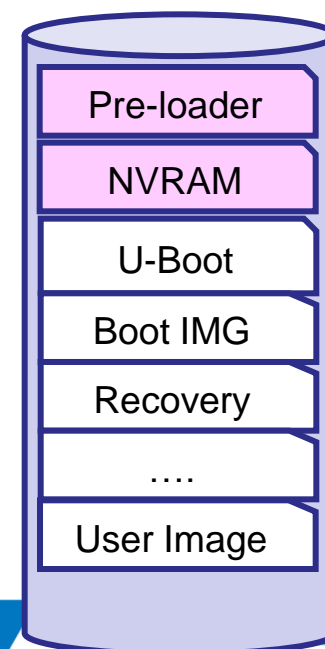

Format:

- Erase Flash blocks

Format from Preloader to User Image+ Download

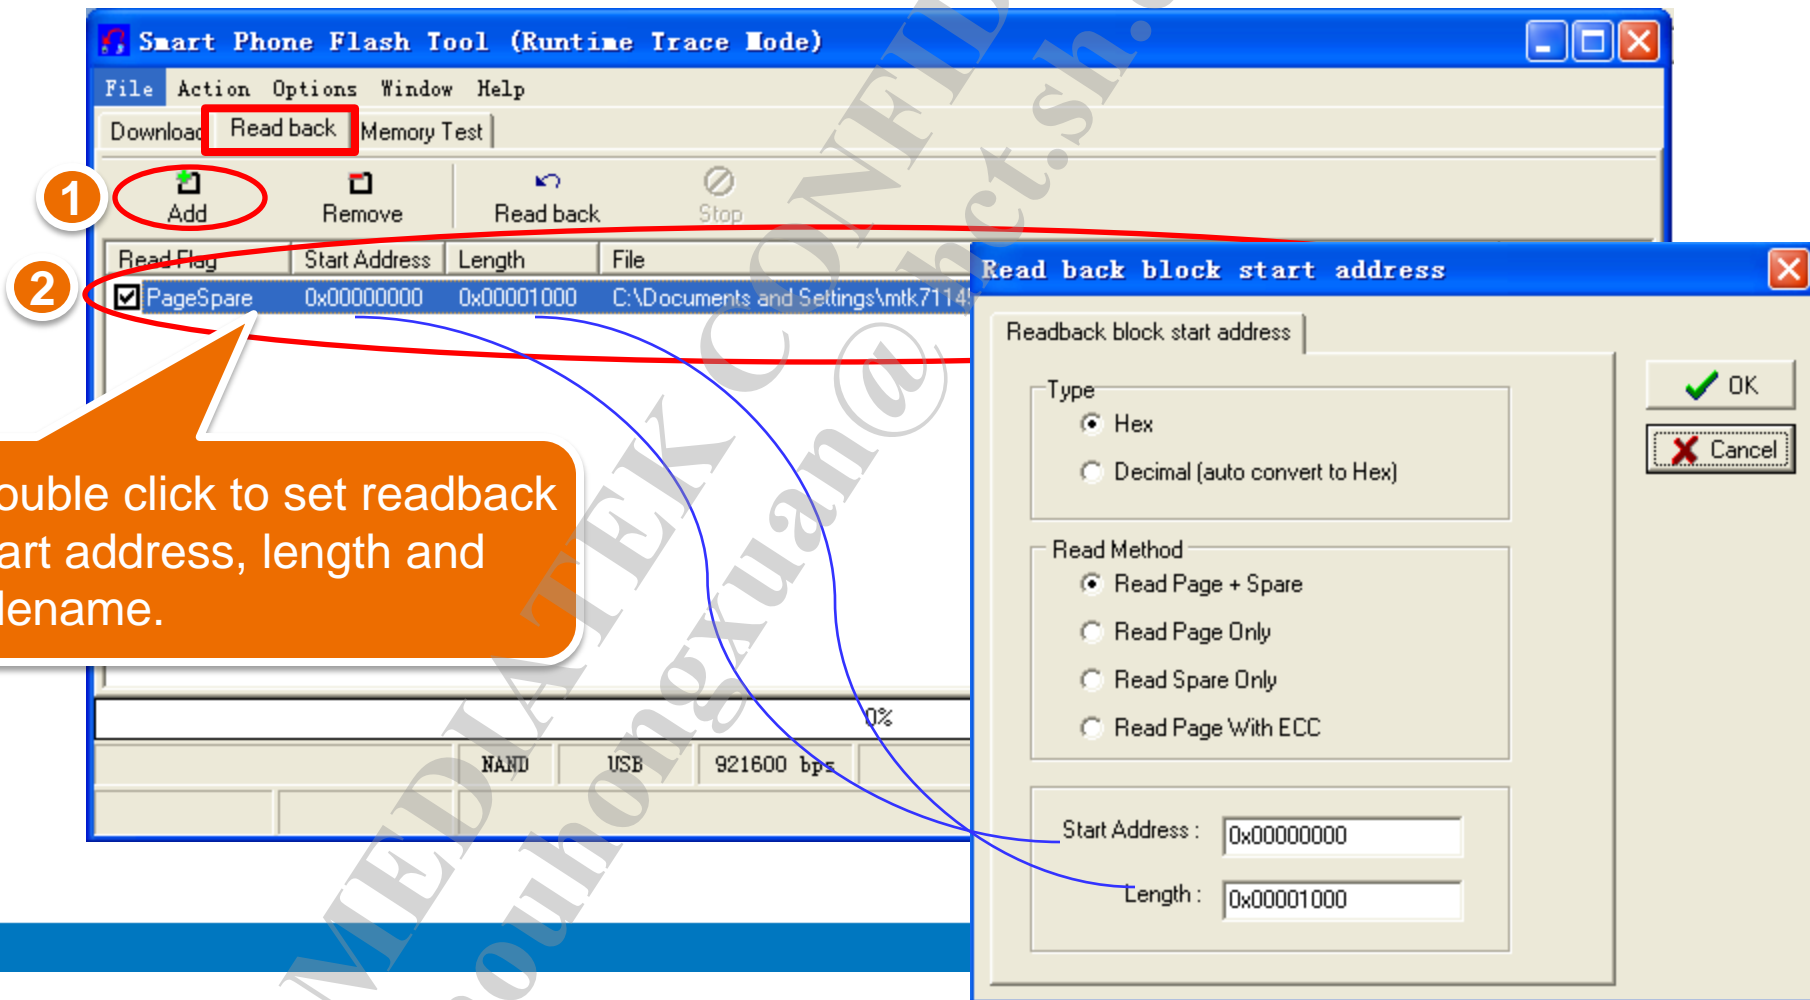

Logic Format Range

Feature Support - SP Flash Tool

■ ReadBack:

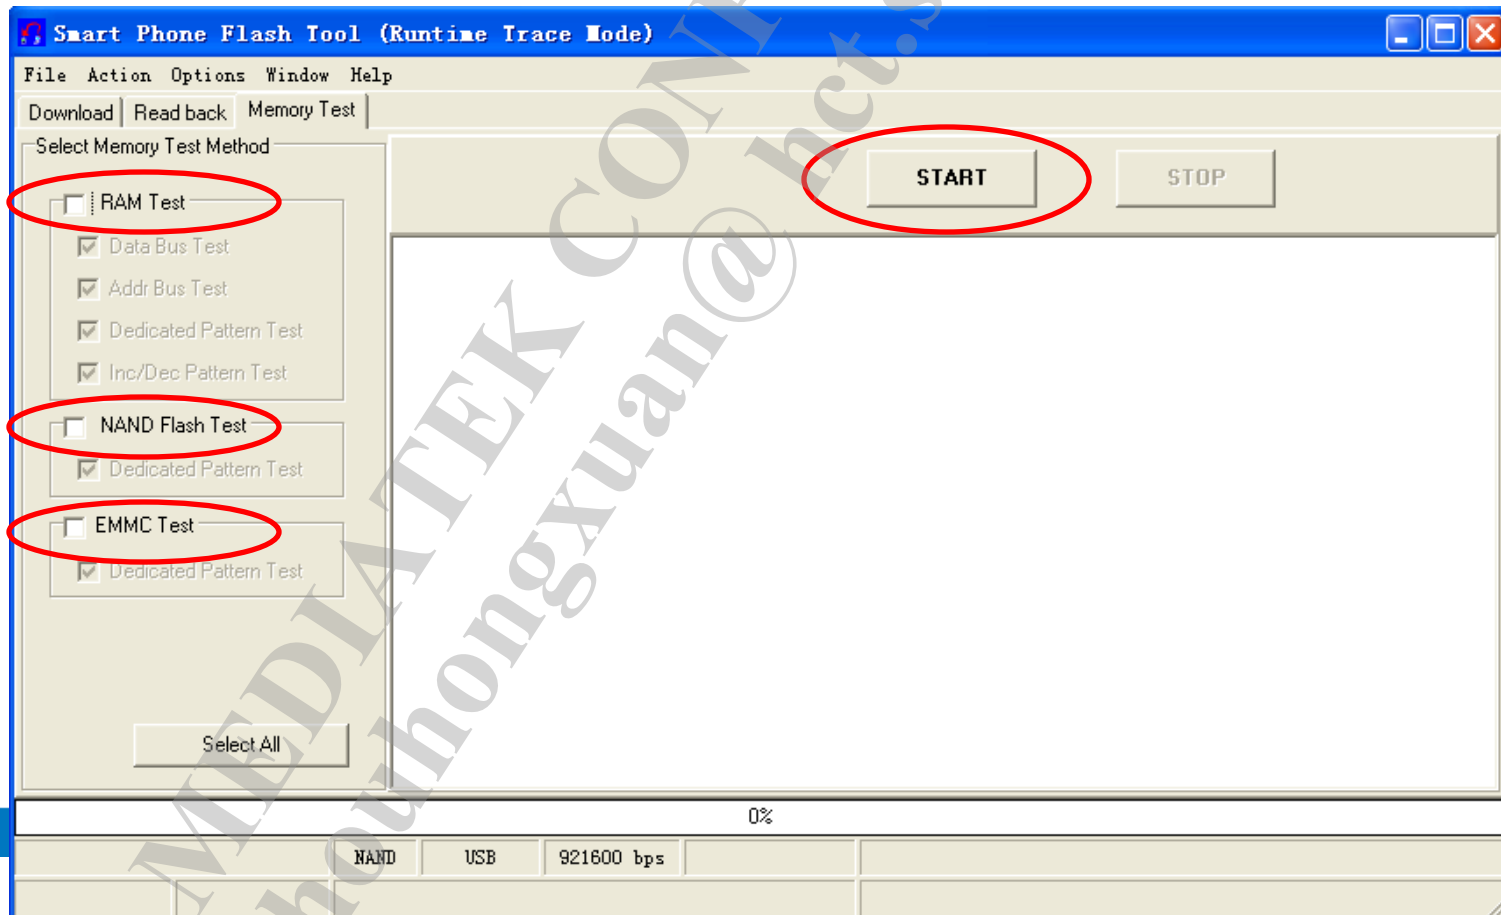

- Read flash raw data to PC side

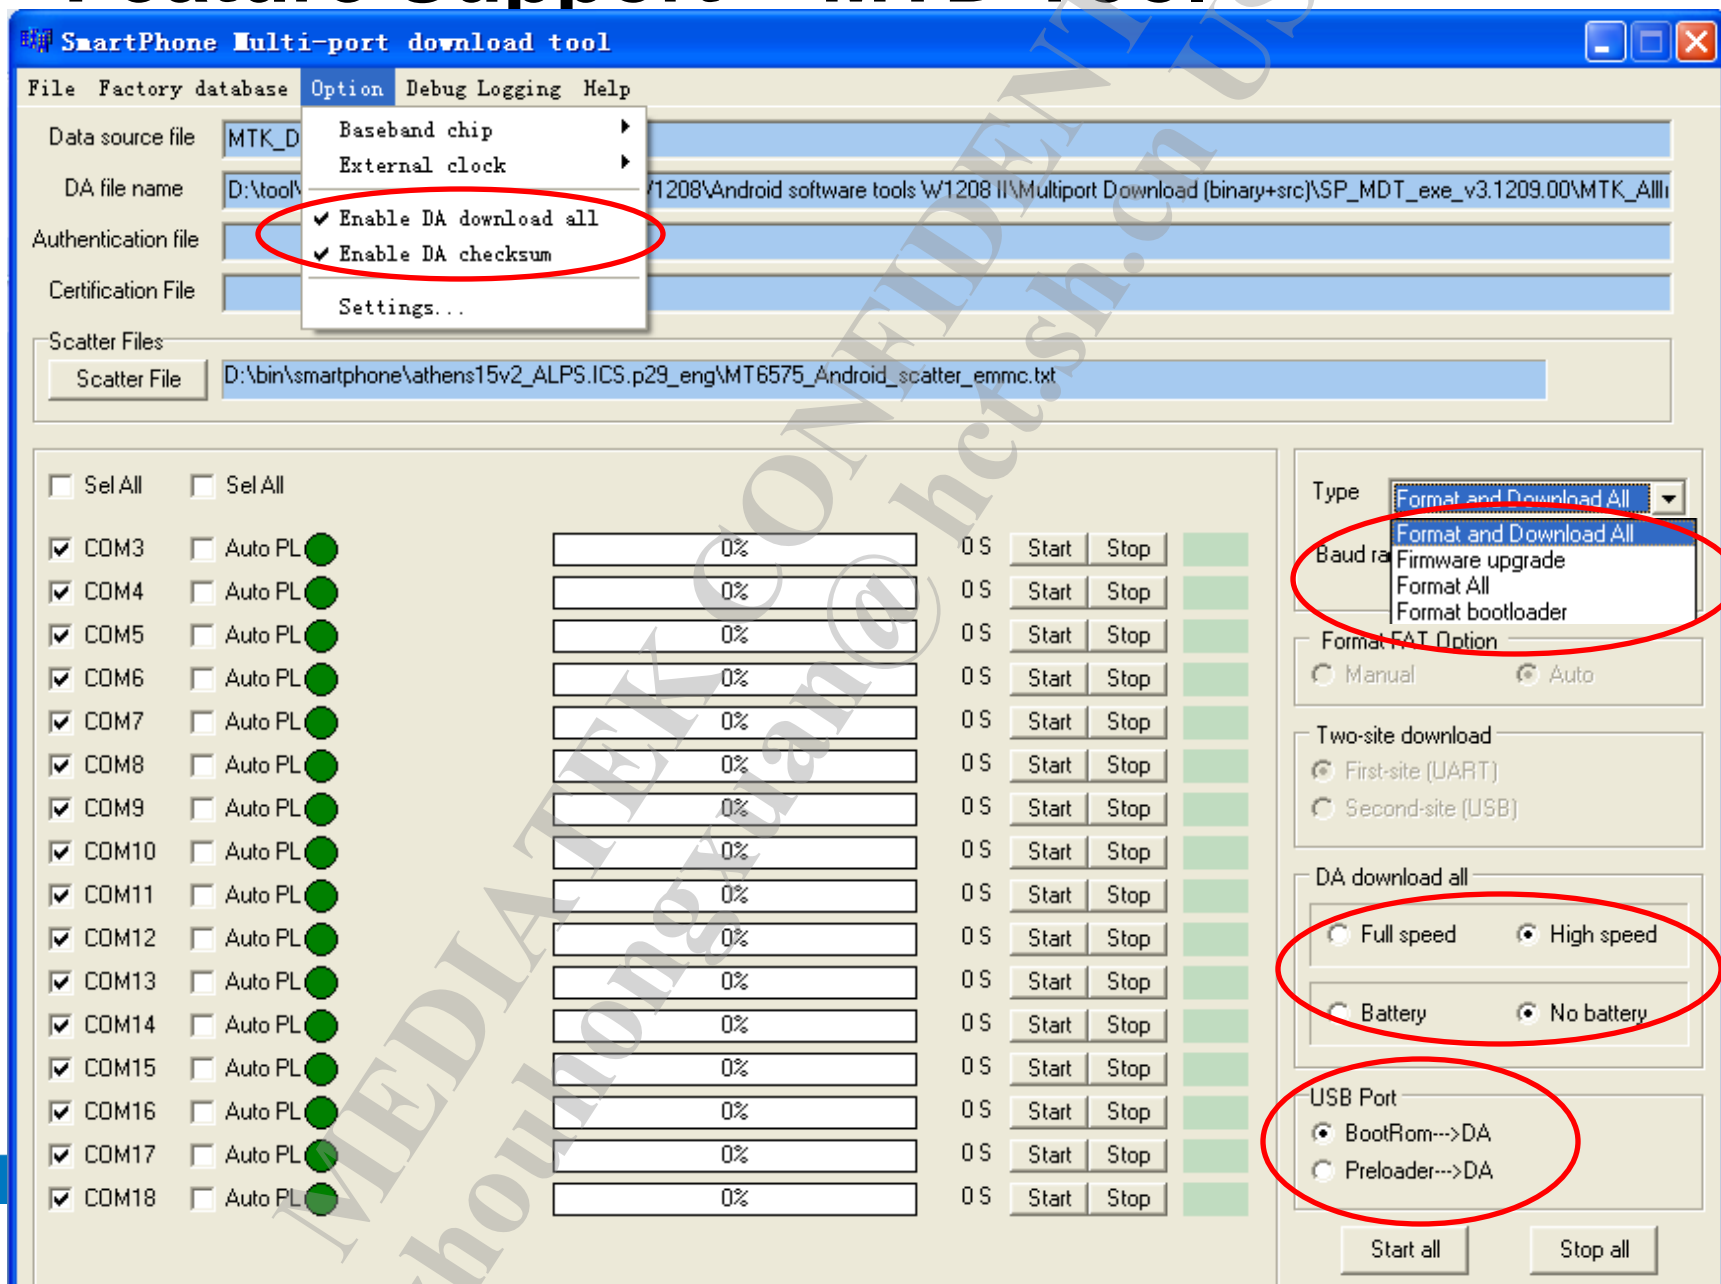

Feature Support - SP Flash Tool

■ Memory Test:

- Basic DRAM/NAND/eMMC r/w IO Test
- Verify the correctness and stability of memory devices and schematic layout on a PCB.

Feature Support - MTD Tool

Feature Support - MDTool

■ Format and Download All

- Format flash
 - NAND: format the whole flash
 - EMMC: format the region
 - Boot Partition1/2+RPMB+GP1/2/3/4+User Area
- Download all

Feature Support - MDTool

■ Firmware Upgrade

- ReadBack NVRAM bin region to PC
- Format flash
 - NAND: format the whole flash
 - EMMC: format the region
 - Boot Partition1/2+RPMB+GP1/2/3/4+User Area
- Download all
- Restore NVRAM bin region to target

Feature Support - MDTTool

■ Format All

- NAND: format the whole flash
- EMMC: format the region
 - Boot Partition1/2+RPMB+GP1/2/3/4+User Area

■ Format bootloader

- Format preloader in flash

Feature Support - MDTool

■ BootRom->DA

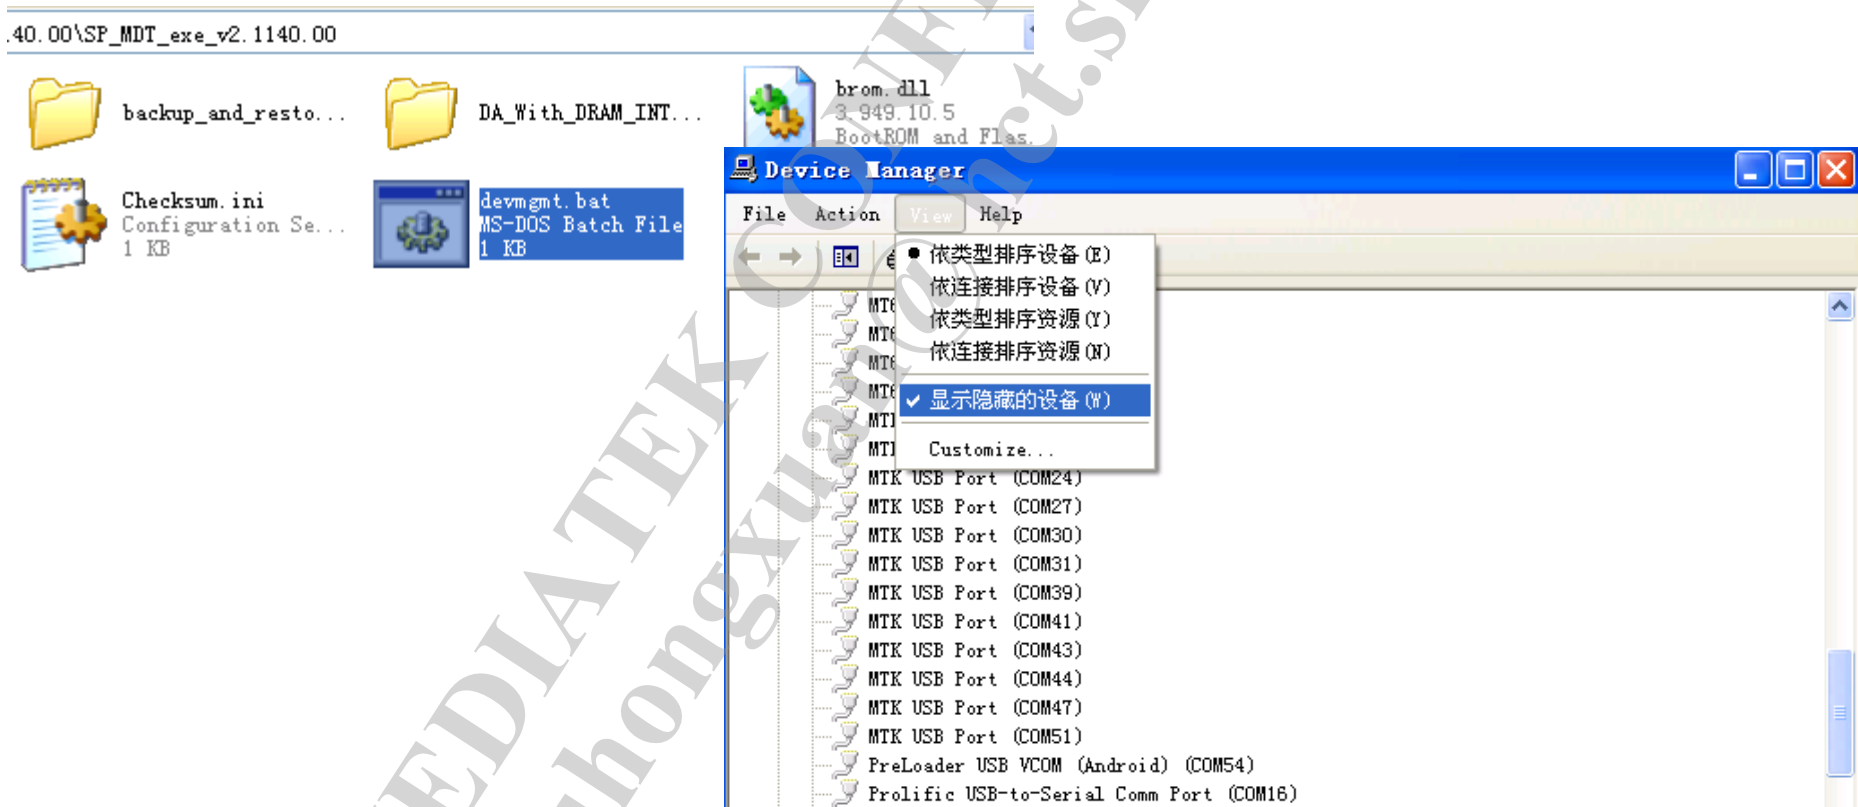

- 第一次download，flash为空
- 非第一次download，下载时需按 KCOL0(BROM USB DL Key)

■ Preloader->DA

- 手机中有preloader，下载时不需按
- MT6575 emmc默认支持preloader DL DA
- MT6573 支持preloader DL DA，需要申请patch：[ALPS0008751](#)
 - FlashTool from 1148 supported，MDT not supported

How to reinstall your PC driver

- CMD to show all Comport device
 - Click *devmgmt.bat* in MDT Tool folder
 - Check view->显示隐藏设备.

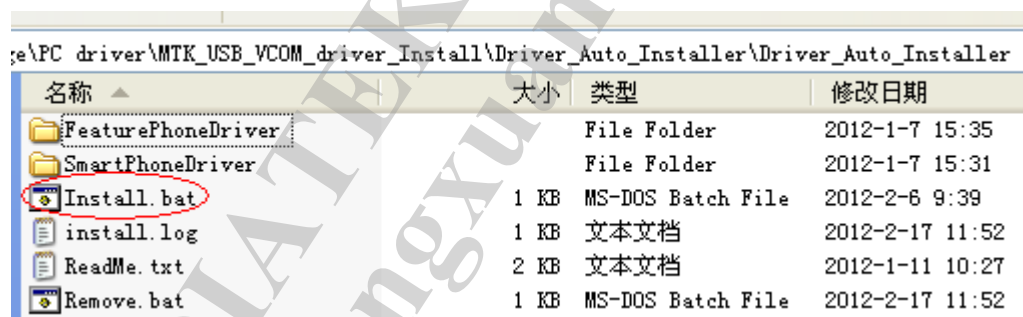

How to reinstall your PC driver

■ Uninstall PC driver

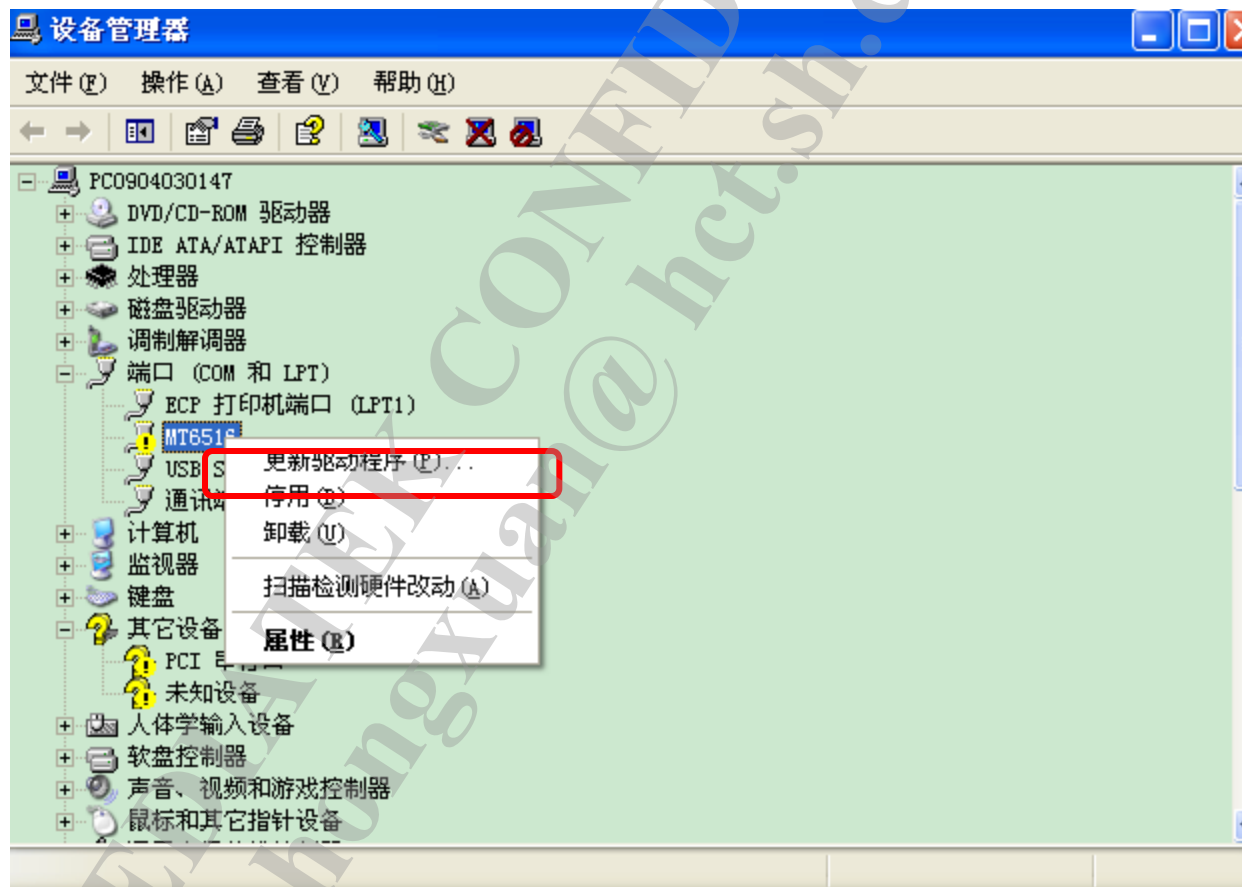

■ Re-Install PC driver

How to reinstall your PC driver

- Right Click -> Update Driver,

Feature Support – DA CheckSum

■ Background

- 有些image太大，可能会在pc buffer里面内容就发生错误。这可能会导致下载时，电脑出现卡机画面司机，或者不能进入META。

■ Methods

- 申请patch ALPS00117556，压缩image大小
- 在工具中加入Checksum4PCMemoryBuffer功能
 - 将工具包中的Checksum_Generate.exe复制到load所在的文件夹（即scatter file所在的文件夹）
 - 双击Checksum_Generate.exe在此文件夹中生成Checksum.ini文件
 - 在工具中勾选Enable DA CheckSum

■ Purpose

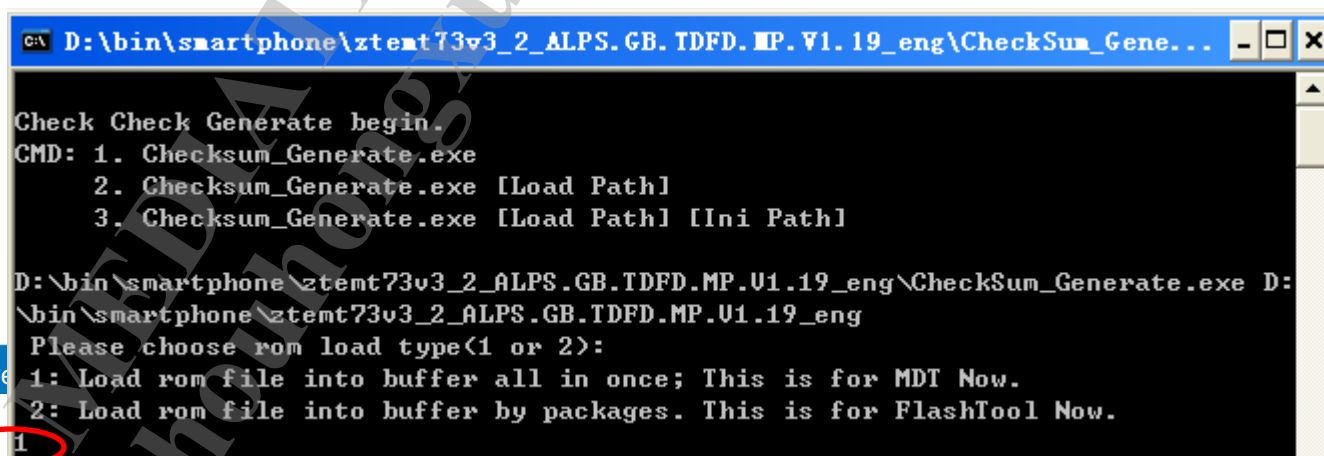

- 确保PC buffer中的内容不会发生错误，保证下载的内容一定是正确的。

How to generate checksum.ini

- Copy CheckSum_Generate.exe to image folder

- Double Click CheckSum_Generate.exe

Input **1** and
press **enter**

How to generate checksum.ini

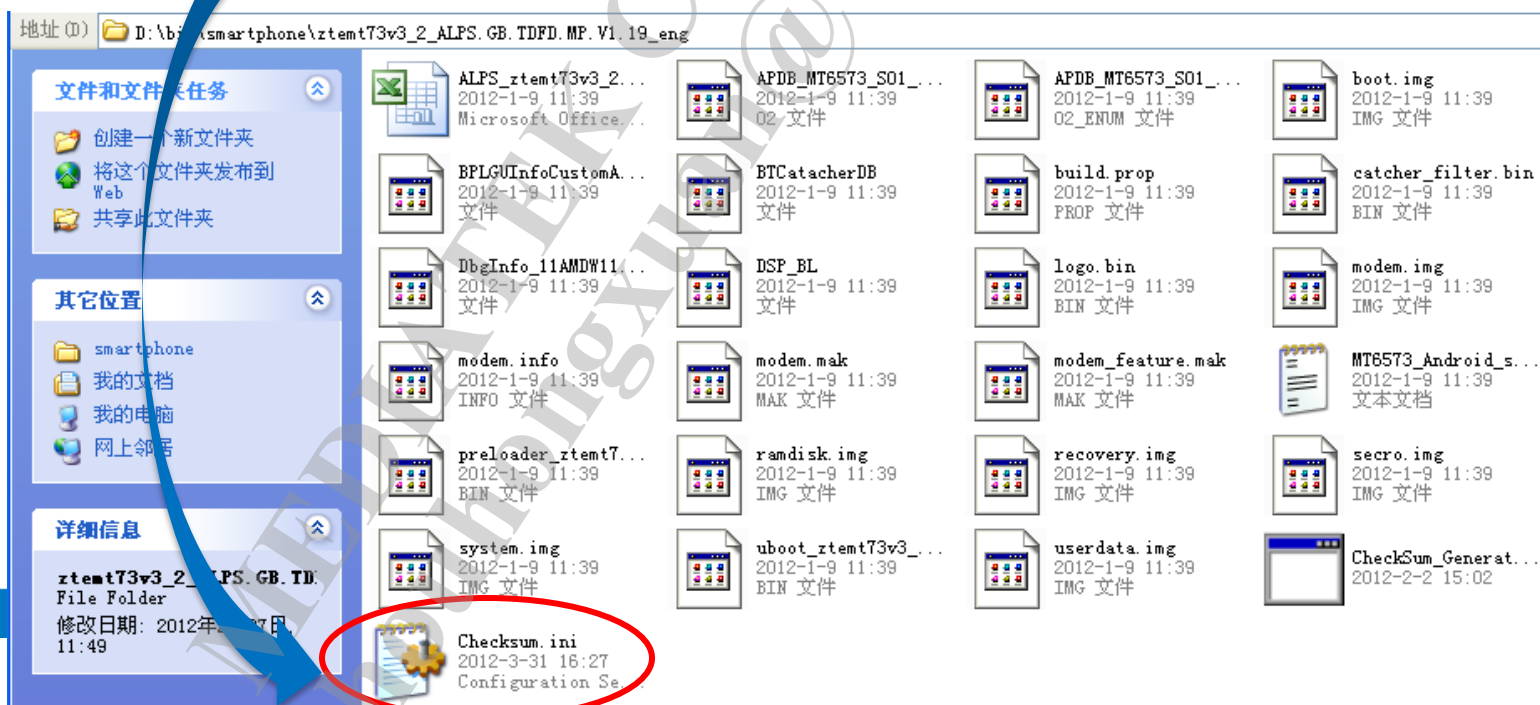

```

C:\ D:\bin\smartphone\ztemt73v3_2_ALPS.GB.TDFD.MP.V1.19_eng\CheckSum_Gene...
iter->Get_Checksum() ==== 1308452995
00396AC8 = 00396A28; size = 206948544
FileUnit is_check_by_pkg is 0
FileUnit is_check_by_pkg is 0
iter->Get_Checksum() ==== 260667835
00396AC8 = 00396A28; size = 2694912

Check Sum Write to ini File Finished.

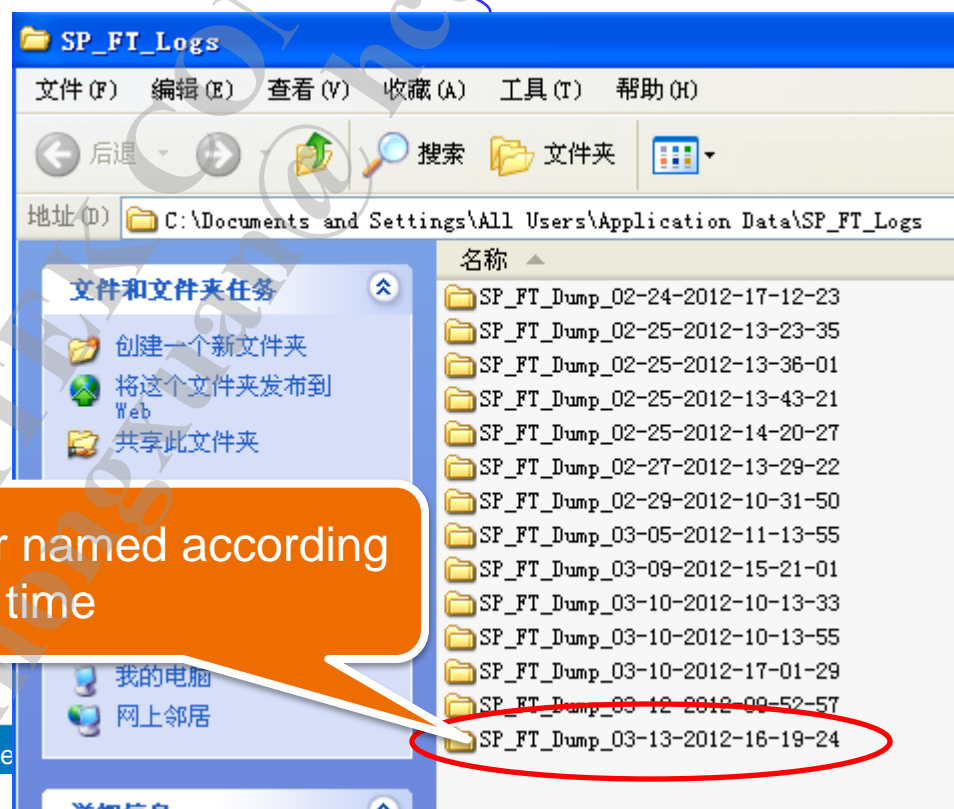

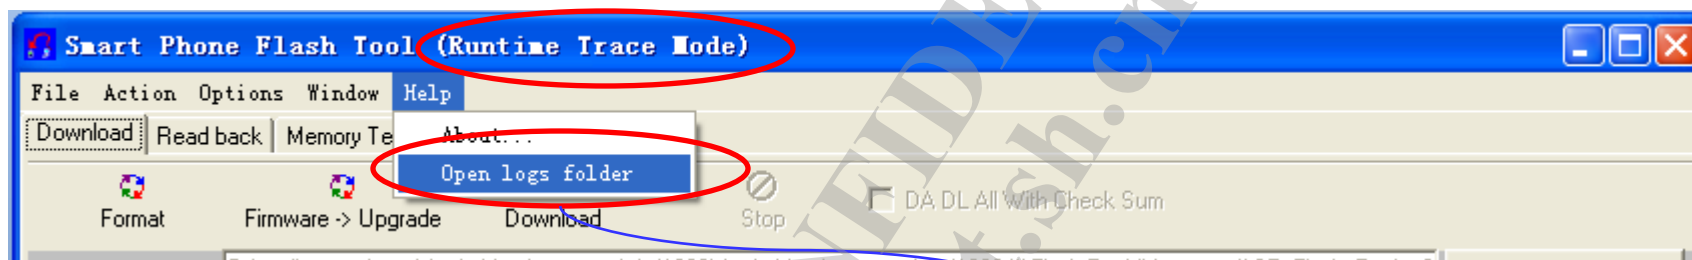

请按任意键继续. . .

```

Feature Support – How to find logs

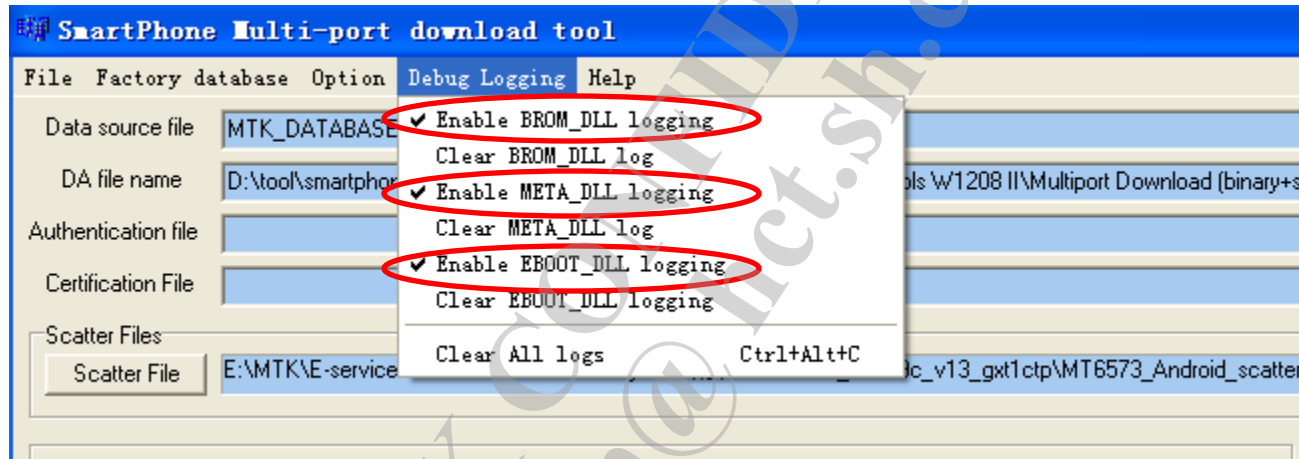

■ SP FlashTool

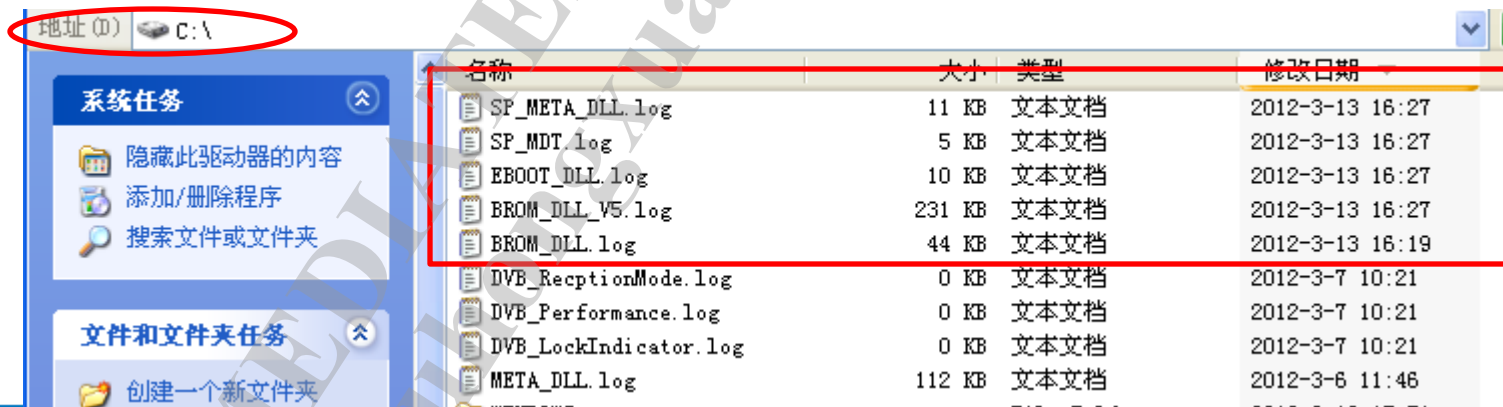

Feature Support – How to find logs

MDT

- Before downloading, please set the UI as following:

- After downloading, you can find the logs here.

DL and Firmware Update Summary

- 1. 工廠端，第一次download使用: **FORMAT +Download** ;
 - =>[Download] DA完成对整个NAND的erase操作，并将image下载到手机中去
[Bootup] 此后开机bootup到bootimg
- 2. 工厂,售后, 透过DL Tool进行 USB update image, 选择 **Firmware Update.**
 - =>[Update] USB download 覆盖上一个版本的相关image区域, 保留nvram区域. 如果您还在flash tool勾选了user image, user data数据会被擦除更新掉，否则不会.
 - [Bootup] 此后开机bootup到新bootimg
- 3. 客戶或工厂，使用 Android 內的 **Setting -> privacy -> restore factory** 的選項**reset Factory (Clean Boot)**
 - => [Recovery] 重新Reset，bootup到 Recovery image，清除 user data, Cache 区域. 保留NVRAM参数. 时间大约20 s.
 - 然后重新bootup到bootimg(有断电处理，当看到下一次开机跑bootloader，就可以关机了)
- 4. End User端，透过**SD image update**
 - =>[update] 按特定key，进入recovery image，升级Boot.img, recovery.img, system.img，保留nvram, user data区域(有断电处理)
 - [Bootup] 此后开机bootup到新bootimg

FAQ

FAQ(1)

- 通用串行总线为82801的电脑，使用USB下载时，如果选择USB FS+HS的方式，当下完DA之后，无法切换到HS模式，会导致下载失败。

- **[Cause]**

- 82801总线对USB设备支持不太好，这是common问题

- **[Solution]**

- 购买NEC PCI卡进行download

FAQ(2)

■ MT6573可以先插入USB，再press USB DL key进行download，但是MT6575不能这样操作

— [Cause]

- MT6575有PMIC供电功能，插上USB线后就会开机
- MT6573/MT6513没有这个功能

— [Solution]

- MT6575如果进行USB按键下载，需要先Press USB DL Key，再插入USB线

FAQ(3)

■ MT651X/MT657X如何实现Auto Detection下载, 不用按DL key

— [Solution]

	Without battery	Auto detection
MT6513/73	需按KCOL0	<ul style="list-style-type: none">• 申请patch ALPS00087511• 手机端上电下载• before W1224, 请申请临时tool版本支持
MT6515/75	BAT_ON pin接GND	<ul style="list-style-type: none">• NAND :<ol style="list-style-type: none">1. 将platform.h文件中宏 CFG_LEGACY_USB_DOWNLOAD 设置为02. Before W1224, 请申请临时tool版本支持• EMMC: default on
MT6517/77	X	Default on

FAQ(3)

■ MT651X/MT657X如何实现Auto Detection下载, 不用按DL key

— [Solution]

	Without battery	Auto detection
MT6513/73	需按KCOL0	<ul style="list-style-type: none">• 申请patch ALPS00087511• 手机端上电下载• before W1224, 请申请临时tool版本支持
MT6515/75	BAT_ON pin接GND	<ul style="list-style-type: none">• NAND :<ol style="list-style-type: none">1. 将platform.h文件中宏 CFG_LEGACY_USB_DOWNLOAD 设置为02. Before W1224, 请申请临时tool版本支持• EMMC: default on
MT6517/77	X	Default on

FAQ(4)

■ Get DRAM Setting Fail (for eMMC project)

— [Cause]

- FlashToolLib会check Scat file 是否有“emmc”，用于标记storage type (HW_STORAGE_EMMC)
- 因为没有正确标记storage type，第一个动作，get DRAM setting会失败
- 虽然从DA report我们可以明确知道HW是eMMC，但为了防呆，防止客户把Nand的image下载到eMMC，**特别定下一条rule: 必须用“emmc” naming scatter file.**

— [Solution]

- **Scat file**必须带 “emmc” /”EMMC”字样，例如
 - 6575_Android_scatter_ **emmc**.txt

FAQ(5)

■ Get DRAM Setting Fail or Set DRAM Setting Fail

— [Cause]

- Get dram setting fail一般是preloader中的flash id配置不正确，或者是emi timing配置错误

— [Solution]

- 请客户的驱动工程师检查memory的配置

FAQ(6)

■ Title: How to know the real FlashID and is it support or not?

— [Cause]

- 对于Nand Flash，需要DA Nand table 有支持才能进行下载
- 对于DA没有support的FlashID，也可以从DA report知道实际的FlashID

— [Solution]

- Check DA report in BROM_DLL_V5.log

SyncWithDA(): DA_REPORT: NAND: m_nand_ret="**S_DA_NAND_UNSUPPORTED_DEV_ID**"(3010)

SyncWithDA(): DA_REPORT: NAND: m_nand_chip_select="CS_0"(0x00)

SyncWithDA(): DA_REPORT: NAND: m_nand_flash_id(0xFFFF)="NAND_UNKNOWN"

SyncWithDA(): DA_REPORT: NAND: m_nand_flash_size(0x00000000)

SyncWithDA(): DA_REPORT: NAND: m_nand_flash_dev_code_1(**0x00EC**)

SyncWithDA(): DA_REPORT: NAND: m_nand_flash_dev_code_2(**0x00BC**)

SyncWithDA(): DA_REPORT: NAND: m_nand_flash_dev_code_3(**0x0000**)

SyncWithDA(): DA_REPORT: NAND: m_nand_flash_dev_code_4(**0x006A**)

SyncWithDA(): DA_REPORT: NAND: m_nand_flash_dev_code_5(**0x0056**)

Note: we could know that: the FlashID(ECBC006A56) is not supported by current DA.

FAQ(7)

■ 无法加载preloader.bin

— [Cause]

- 编译环境问题，查看Preloader log, 会有一行错误./wine is not owned by you

— [Solution]

- 对wine所在的目录添加777的权限

FAQ(8)

■ Flashtool报错

S_DA_UPDATE_BOOTLOADER_FILE_SIZE_EXCEEDS_BOUNDARY_ADDR

— [Cause]

- Nand flash配置为4G+4G, 但是memory配置仍为4G+2G

— [Solution]

- 修改手机memory配置为4G+4G

FAQ(9)

- Flashtool format whole flash和MDT format and download all的区别
 - [Cause]
 - 对nand flash, 两者的行为有差异
 - [Solution]
 - Flashtool做logical format, length 为0x1F5C0000
 - MDT做physical format, length为整个flash大小, 即0x20000000

FAQ(10)

- 1208多路下载工具，勾选Auto PL后，下载成功后，如果几秒之内不拔下手机，还会继续重新下载。

- **[Cause]**

- Flashtool lib API (Flashtool_disconnect) 功能修改导致

- **[Solution]**

- 升级到1212多口工具解决问题

FAQ(11)

■ H9DP32A4JJAC 206A下载的时候出现错误： S_DL_GET_DRAM_SETTING_FAIL

— [Cause]

- 敝司MVG verify的是H9DP32A4JJAC 202ES, H9DP32A4JJAC 206A这颗FLASH的Flash ID&Timing与H9DP32A4JJAC 202ES都不一致，所以报错

— [Solution]

- 请与MCP Vendor联系，Vendor会帮忙处理

FAQ(12)

- 使用Flash tool，Firmware>upgrade功能，发现nvram里的射频参数、IMEI号全部被删除了，请问是否正常

— [Cause]

- Firmware upgrade的feature是把NVRAM BIN REGION的数据拷贝出来，最后再restore会去
- 使用前提是已经做过校准参数备份，如果使用我们的tool，在两种情况下去备份：
 1. ATE校准的最后一个步骤会去备份
 2. SN Writer，如果勾上Set clean boot，则会去备份
- 请先确保做过上面的操作，如果没有做过操作，NVRAM Bin region便是空的，即便是选择firmware upgrade，最后restore的数据也是错误的

— [Solution]

- 1. 使用ATE校准
- 2. 使用SN Writer，勾上Set clean boot
- 3. 最后再使用flash tool的firmware upgrade

FAQ(13)

■ How to customize flash download tool

— [Solution]

- 参考DCC(或者DMS)的文档：
- 路径：/Product Line/WCX/3G Phone Data/Smart Phone/Software_Customer/Standard Package/MT6575 SW Doc Package/Tools
- 文档名称：SP_BR0M_DLL_Development_Kit_User_Manual.doc
